### **Recall: Android widgets**

#### **Button (link)**

A clickable widget with a text label

Button 1
Button 2
Button 3

key attributes:

android:clickable="bool"	set to false to disable the button
android:id="@+id/ <i>theID</i> "	unique ID for use in Java code
android:onClick="function"	function to call in activity when clicked (must be public, void, and take a View arg)
android:text=" <i>text</i> "	text to put in the button

represented by Button class in Java code

```
Button b = (Button) findViewById(R.id.theID);
```

• • •

### **ImageButton**

#### A clickable widget with an image label

#### key attributes:

android:clickable="bool"	set to false to disable the button
android:id="@+id/ <i>theID</i> "	unique ID for use in Java code
android:onClick="function"	function to call in activity when clicked (must be public, void, and take a View arg)
android:src="@drawable/img"	image to put in the button (must correspond to an image resource)

- to set up an image resource:
  - put image file in project folder app/src/main/res/drawable
  - use @drawable/foo to refer to foo.png
    - use simple file names with only letters and numbers

#### **ImageView**

#### Displays an image without being clickable

key attributes:

android:id="@+id/ <i>theID</i> "	unique ID for use in Java code
android:src="@drawable/img"	image to put in the screen (must correspond to an image resource)

- to change the visible image, in Java code:
  - get the ImageView using findViewById
  - call its setImageResource method and pass R.drawable.filename

### EditText (link)

An editable text input box

EditText 1 (206)555-1212

#### key attributes:

android:hint=" <i>text</i> "	gray text to show before user starts to type
android:id="@+id/ <i>theID</i> "	unique ID for use in Java code
android:inputType=" <i>type</i> "	what kind of input is being typed; number, phone, date, time,
android:lines=" <b>int</b> "	number of visible lines (rows) of input
android:maxLines="int"	max lines to allow user to type in the box
android:text=" <i>text</i> "	initial text to put in box (default empty)
android:textSize=" <i>size</i> "	size of font to use (e.g. "20dp")

 others: capitalize, digits, fontFamily, letterSpacing, lineSpacingExtra, minLines, numeric, password, phoneNumber, singleLine, textAllCaps, textColor, typeface

### CheckBox (link)

An individual toggleable on/off switch

#### key attributes:

android:checked="bool"	set to true to make it initially checked
android:clickable="bool"	set to false to disable the checkbox
android:id="@+id/ <i>theID</i> "	unique ID for use in Java code
android:onClick="function"	function to call in activity when clicked (must be public, void, and take a View arg)
android:text=" <i>text</i> "	text to put next to the checkbox

#### In Java code:

```
CheckBox cb = (CheckBox) findViewById(R.id.theID);
cb.toggle();
cb.setChecked(true);
cb.performClick();
```

### RadioButton (link)

A toggleable on/off switch; part of a group

PlainSerifBoldBold & Italic

key attributes:

android:checked="bool"	set to true to make it initially checked
android:clickable="bool"	set to false to disable the button
android:id="@+id/ <i>theID</i> "	unique ID for use in Java code
android:onClick=" <i>function</i> "	function to call in activity when clicked (must be public, void, and take a View arg)
android:text=" <i>text</i> "	text to put next to the button

 need to be nested inside a RadioGroup tag in XML so that only one can be selected at a time

### RadioGroup example

```
<LinearLayout ...</pre>
        android:orientation="vertical"
        android:gravity="center|top">
    <RadioGroup ...
             android:orientation="horizontal">
        <RadioButton ... android:id="@+id/lions"</pre>
                           android:text="Lions"
                           android:onClick="radioClick" />
        <RadioButton ... android:id="@+id/tigers"</pre>
                           android:text="Tigers"
                           android:checked="true"
                           android:onClick="radioClick" />
        <RadioButton ... android:id="@+id/bears"</pre>
                           android:text="Bears, oh my!"
                           android:onClick="radioClick" />
    </RadioGroup>
```

</LinearLayout>

#### Reusing on Click handler

```
// in MainActivity.java
public class MainActivity extends Activity {
    public void radioClick(View view) {
        // check which radio button was clicked
        if (view.getId() == R.id.lions) {
            // ...
        } else if (view.getId() == R.id.tigers) {
            // ...
        } else {
            // bears ...
```

## Spinner (link)

A drop-down menu of selectable choices

key attributes:

android:clickable="bool"	set to false to disable the spinner
android:id="@+id/ <i>theID</i> "	unique ID for use in Java code
android:entries="@array/ <i>array</i> "	set of options to appear in spinner (must match an array in strings.xml)
android:prompt="@string/ <i>text</i> "	title text when dialog of choices pops up

- also need to handle events in Java code (see later)
  - must get the Spinner object using findViewById
  - then call its setOnItemSelectedListener method (see example)

#### **String resources**

Declare constant strings and arrays in res/values/strings.xml:

- Refer to them in Java code:
  - as a resource: R.string.name, R.array.name
  - as a string or array: getResources().getString(R.string.name),
     getResources().getStringArray(R.array.name)

#### Spinner example

```
<Spinner ... android:id="@+id/tmnt"</pre>
                                                                 Leonardo
        android:entries="@array/turtles"
                                                                 Michelangelo
        android:prompt="@string/choose turtle" />
                                                                 Donatello
    <TextView ... android:id="@+id/result" />
</LinearLayout>
                                                                 Raphael
   in res/values/strings.xml:
    <resources>
        <string name="choose_turtle">Choose a turtle:</string>
        <string-array name="turtles">
             <item>Leonardo</item>
             <item>Michelangelo</item>
             <item>Donatello</item>
             <item>Raphael</item>
        </string-array>
    </resources>
```

<LinearLayout ...>

#### Spinner event example

```
// in MainActivity.java
public class MainActivity extends Activity {
                                                                      Leonardo
                                                                      Michelangelo
 @Override
  protected void onCreate(Bundle savedInstanceState) {
                                                                      Donatello
    super.onCreate(savedInstanceState);
                                                                      Raphael
    setContentView(R.layout.activity main);
    Spinner spin = (Spinner) findViewById(R.id.tmnt);
    spin.setOnItemSelectedListener(new AdapterView.OnItemSelectedListener() {
      public void onItemSelected(AdapterView<?> spin, View v, int i, long id) {
        TextView result = (TextView) findViewById(R.id.turtle result);
        result.setText("You chose " + spin.getSelectedItem());
      }
      public void onNothingSelected(AdapterView<?> parent) {} // empty
    });
```

#### TMNT app exercise

- Write an app to select TMNT characters from a spinner.
  - When a character is selected, an image about that character and other information is presented to the user.
  - Assume that relevant image files are already available for each character.

#### **ScrollView**

# A container with scrollbars around another widget or container

is a fictional character and one of the four protagonists of the Teenage Mutant Ninja Turtles comics and all related media. His mask is typically portrayed as orange outside of the Mirage/Image Comics and his weapons are dual nunchucks, though he has also been portrayed using other weapons, such as a grappling hook, manriki-gusari.

## List (link)

A visible menu of selectable choices

• lists are more complicated, so we'll cover them later ...
